TITLE: Ultrasonic diagnostic and medical treatment
apparatus - supplies
ultrasonic propagation medium for propagation of ultrasonic
waves via first and
second tubes which are connected to space formed between
spherical
piezoelectric element and both ends of housing

PATENT-ASSIGNEE: OLYMPUS OPTICAL CO LTD[OLYU]

ABSTRACTED-PUB-NO: JP10127678A

BASIC-ABSTRACT: The apparatus (1) has an ultrasonic probe
(3) provided with a
spherical piezoelectric element (15) which generates
ultrasonic wave for
medical treatment. The piezoelectric element is fixed in a
housing (11) of an
ultrasonic vibrator (13). A first space (17) is formed
between the concave
side of the piezoelectric element and vinyl chloride film
(16) is formed at one
end of the housing.

A second space (19) is formed between the convex side of
piezoelectric element

and end face of an acoustic lens (18). A medium supply unit supplies ultrasonic propagation medium for propagation of ultrasonic wave via a multi-lumen tube. The multi-lumen tube includes a first tube (20) which is connected to the first space and second tube (21) which is connected to the second space.

ADVANTAGE - Consumes less time for treatment. Operates in simple manner.
